

A13 Multimodal Module — Test Document

This document was generated automatically by the A13 multimodal module of Daughter AI.

The module supports six capabilities: image generation, image understanding, PDF generation, PDF reading, DOCX generation, and DOCX reading.

All inference runs fully on-device using Apple Silicon via MLX. Image understanding is handled by Qwen3.5-9B loaded through `mlx_vlm`. Image generation uses FLUX.1 Schnell from the `mflux` library.

This PDF was produced using reportlab with A4 page size and standard margins.
